JS (Part 10)
Practice Questions

Qs1. Try out the following events in Event Listener on your own :
- mouseout
- keypress
- Scroll
- load

[Use MDN for help]

Qs2. Create a button on the page using JavaScript. Add an event listener to the button that changes the button's color to green when it is clicked.

Qs3. Create an input element on the page with a placeholder "enter your name" and an H2 heading on the page inside HTML.
The purpose of this input element is to enter a user's name so it should only input letters from a-z, A-Z and space (all other characters should not be detected).
Whenever the user inputs their name, their input should be dynamically visible inside the heading.
[Please note that no other character apart from the allowed characters should be visible in the heading]
